SpooliT® Enterprise

Intelligence in document management

SpooliT is intelligent document management.

What makes Asymex SpooliT remarkable is a pure combination of user functionality and market leading delivery speed - this cuts through workflow inefficiencies. SpooliT is the ultimate iSeries document management solution, allowing individual users and experts in data management alike to access, format, schedule and automatically distribute reports in all commonly used file format.

SpooliT automatically converts and outputs spool files to:

SpooliT Business Senario Solutions:

- Do you currently have poor reporting workflows?
- Is information lost, poorly presented?
- Frustrated by hours of reformatting information?
- Is your archive difficult to navigate and maintain?
- Does it take hours and days to get information?

SpooliT is the solution, giving you the control you seek

No components or modules -the difference is instant access to your iSeries via a single GUI, convert reports in the format you want and distribute automatically.

Benefits across your entire organisation:

- Boosts productivity by automating workflow
- Improves customer service responsiveness
- Instant and measurable ROI - Zero disruption
- Eliminates paper shuffling and duplication
- Reduces paper, postage and storage costs
- Integrates existing business applications
- Decreases data loss and misfiling occurences
- Track, search and log work history throughout

SpooliT's unique features include:

- A fully integrated total solution without requirement for add-ons
- Intelligent archiving allowing multiple views, searches & retrievals
- User friendly "wizards" break down complex tasks into easy steps
- One button file conversion to PDF, EXCEL, HTML, WRD, CSV + MORE
- Best in class delivery processing and delivery speed
- Distribution rules allow complete freedom to set, schedule & forget

"SpooliT enabled us to take a big step towards becoming a true paperless workplace. That's good for us & good for the environment. We give them a big tick - Nike

SpooliT® Enterprise

Intelligence in document management

SpooliT Enterprise Product Information

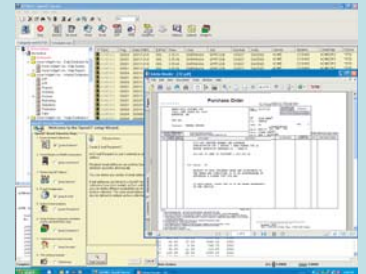

SpooliT Enterprise is designed to enable companies to download, archive, and reformat spool files into common PC formats, then distribute iSeries and AS/400 reports automatically. This produces a new range of business options that both reduce workflow demands and create new ways to serve customers

Discover capabilities you never thought possible without intense administration! With SpooliT you can easily identify mission critical data, save these definitions as templates, and most importantly reuse these to directly feed PC applications such as Excel.

At the heart of SpooliT resides an intuitive rules based engine with the versatility to create archiving rules, categorization rules, distribution rules, data mining and extraction rules. Dynamically monitor any number of iSeries 400 output queues, this enhances transparency and create SpooliT schedules to automate jobs.

SpooliT Enterprise edition offers an unlimited site licence, for each iSeries or AS400. Install any combination of SpooliT products for any number of users.

Automatically File, Format & Output Spools Files to:

End User Friendly Intuitive Interface

Immediately enhance your workflow

SpooliT Enterprise delivers an incredible range of benefits:

- Automatically send e-mails and fax reports to anyone, anywhere, anytime!
- Schedule SpooliT to perform automatic archives or any other AS/400/iSeries jobs.
- Point and click, drop, drag reporting for "quick" export or import of spool files
- Includes the powerful ability to create and save designer export templates
- Archives and indexes spool files in a compressed easy searchable format
- Archive your documents to a PC Drive, CD-ROM or another AS/400/iSeries
- Re-print archived AS400/iSeries reports to any Printer Queue
- Archived reports support IPDS printing allowing special fonts or bar-codes
- Export files directly to your Intranet/the Internet or FTP server or DMZ!
- Win.Explorer style GUI with a proven and robust Client/Server architecture
- Communicate via TCP/IP - No routers or client access necessary
- All processing is performed on the PC client on any Windows Platform
- Manage documents across multiple AS/400's and iSeries computers

IBM Server Proven™

SpooliT Customer Business Scenario

Panasonic

The Challenge

In their own words ...

“We have a deadlines to report inventory and financial information to Japan, in the case of the current assets this is required daily. So we are really about supporting the end users to get these done. Previously some of our reports could only be produced in hard copy and then individuals would have to remanufacture the information into their own reports. We also have our own in house ERP system too which was producing reports which we then need to convert to Excel.

“We are over the moon! It’s a big time saver to have our reports automatically formatted converted and sent to the end users”

SpooliT Solution

Where our end users would have spent days producing certain reports it now takes 5 minutes, one of the managers could have kissed me! We are over the moon! It’s a big time saver to have our reports automatically formatted, converted and sent to the end users. They’re really happy because they receive the soft copy and can easily edit it locally if necessary. It’s made a big change and we haven’t scratched the surface of SpooliT - we see big potential for this software.

Expectations Met

We’ve had an hours training and simply review our notes as we go along. There are many ideas we’d like to implement eventually - we need to work out what to do first. We would recommend it, it’s really doing what it’s intended to do.”

- Tested and Proven
- Minutes not days to produce reports
- Significant workflow improvement

- End Users are Rapturous
- Automating Distribution
- Integrates with their ERP
- Sees big potential use
- Reliable and efficient

SpooliT Customer Business Scenario

The Challenge

In their own words ...

“As an AS400/iSeries midrange developer for 10 years I saw the need here to produce spreadsheets that were immediately readable, and to save the manual interaction with IT resources.

Before SpooliT, administration involved downloading then formatting reports before distribution. The objective was to eliminate this as I could see it growing significantly, it was taking up 2 days a month or more of my time and 1 day a month of somebody else.

“We really wanted to distribute customer statements and other reports automatically.”

“I would recommend SpooliT for two reasons; first the spreadsheet templates give us the straight through processing function I selfishly wanted, the second was operationally with house keeping and storage. It is efficient and reliable.

The Future

We really don't use all the functionality to good effect yet, but I can see us using SpooliT more as we learn new ways to improve our own internal reporting and further explore our spool file data histories.”

SpooliT Solution

Recommended by FUJI Film, this light user immediately saved up to 3 days a month in IT overheads with SpooliT's automatic distribution delivering iSeries reports in their preferred spreadsheet format. Simple and efficient workflow improvement: delivered by SpooliT.

- Tested and Proven
- Reduction in Report related administration by 95% within hours
- Immediate Result

- Improving capabilities
- Improving transparency
- Reliable and efficient
- Improving iSeries management
- Improving historical document access
- Improving workflow

SpooliT Customer Business Scenario

The Challenge

In their own words ...

"We did not have an automatic archive and distribution system. What SpooliT provided was this efficiency but then so much more..."

"With 1GB of reports firing out of our system daily any errors have immediate financial consequences"

We were writing and transferring data using an in house developed program which would send reports through another system, which meant double handling.

Most importantly SpooliT is a fire fighting device, as a Bank customers do not tolerate mistakes. With over 1GB of reports firing out of our system daily, including Credit Card statements and Core Banking reports any errors have immediate financial consequences.

The SpooliT Solution

By monitoring out queues through SpooliT we have a much clearer picture, and unexpectedly we can now e-mail statements directly to the client's inbox, this is not only a new straight through process but a new unique customer service we can provide. Through SpooliT we can optimise our archive processes, this produces another level of increased security for the bank.

I would recommend SpooliT. I personally know this product has value. I compared it with others before I purchased. SpooliT is simple, well constructed, easy to use and more economical. It also sits outside the AS400 (and iSeries) environment which is, I think, an added advantage.

I like this product and I would love to explore further applications of it for the bank."

- Creating new service for their clients

- Cut out duplication

- Improving Security

- Improving Tracking

- Reliable and Efficient

- Improving iSeries management

- Improving Archive access

- Improving automated workflow

- Proven Performance

SpooliT® Enterprise

Intelligence in document management

SpooliT Customer Business Scenario

CONTRANS INCOME FUND

The Challenge

In their own words ...

“At Contrans we use SpooliT to extract and convert Excels. Our IT group needed a solution which pushed down to the general user the jobs of manipulating data, a ‘do it yourself’ policy, so that wide spread usage of data can occur rather than relying on a select group.

As a listed national transport company we have hundreds of fuel purchase transactions daily and month end reports. We run 19 companies throughout the US and we needed a way to generate transaction references, and distribute individual reports corporate wide.

“SpooliT was the best fit and has been enhanced even more since; it was certainly the right price.”

The SpooliT Solution

SpooliT is now included on our general install image – this means everyone in Contrans can use SpooliT, it is very easy to show new users. The IT group is free from all but the most complex spool administration. We are certainly not using SpooliT to the extent we could, it is possible we will use it for deposit notification and in all likelihood for nightly reports too.

The archiving capabilities have definitely cut down retention of paper reports; with SpooliT we have immediate access to view, print or e-mail reports. With SOX we’ve had a goal to limit access and SpooliT’s enhancements certainly worked very well.

Thanks for developing and continually enhancing a great product!

- Tested and Proven
- Now on install Image for Do it Yourself Users
- SOX Security Compliant
- Accessing hundreds of reports daily

- Improving Spool archive access and transparency
- Improving Automated Workflow
- Improving corporate wide report distribution
- Improving transaction record and referencing

SpooliT Customer Business Scenario

The Challenge

In their own words ...

"United Rentals is a continental wide (Canada, USA and Mexico) company. We have an entire, dedicated report team to service the dozens of automated reports, which we send to literally hundreds of users on a daily basis. The project goal was to free up the report team, who have a massive responsibility from the tedious repetitive tasks.

So our infrastructure is very large and our user base is very large – we are also SOX compliant which means that we have to consider user security in our infrastructure plans.

"Overall it's a great package with some very good ideas behind it."

SpooliT Solution

We have been using SpooliT since 2005. It handles the major everyday Excel reports, freeing up the reports team for other tasks. The response is very positive from our sales teams who have their commissions updated via SpooliT. We are also currently using Non-AFDS to print jobs to email to PDF, Word, and HTML. The Excel functions combined with the scheduler and emailing are the most important features for us. We do have plans to use the AFPDS feature to allow the emailing of Invoice copies, and that will become very important to us as well.

The Future

Overall it's a great package with some very good ideas behind it and lots of potential. I would recommend SpooliT, this is an exciting product, it installs smoothly and once it's up and running it is really flexible, simple and has very little maintenance.

- SOX compliance proven
- Immediate Results
- Reduces tedious tasks
- Sales Teams Celebrate

- Improving future reporting capability
- Improving flexibility
- Smooth Operation
- Serious potential company wide
- Improving automation
- Scheduling & Emailing

SpooliT® Enterprise

Intelligence in document management

SpooliT Customer Business Scenario

APRIA HEALTHCARE®

The Challenge

In their own words ...

“We’ve been using Monarch for a long time 8-9-10 years, the primary reason to extract and then to format. We take spools that our JD Edwards system creates, some 40,000 to 50,000 pages in size and used EBB to split, based on mapping table to send to specific output queues. This is tedious and time consuming and absolutely horrible. With 40-50,000 page reports, someone will go print it, then delete the file not realising someone else wanted it and we have to run the print job again. We need to serve perhaps 4-5 people in 4-5 different locations with the same reports, say detailed financials copies go to the client officer, the branch manager, regional manager, and vice president. We simply couldn’t do that.

“all this in one is tremendous, you can do that with many but to have it all in one is very nice!”

The SpooliT Solution

SpooliT solves this entirely. We used to run monthly close reports overnight, then print them and fax them. What we can now schedule these to run automatically and distribute automatically. This eliminates the administration entirely, why incur all those additional costs when SpooliT can do this unattended. The other big one is people want Excel, we want our people to do that. For end users it really is very straight forward and even configuration is not that difficult either.

Recommend SpooliT?

Absolutely, it is easy to use and it seems to have all the features:

- easy to schedule jobs
- distributes automatically
- multiple output types, different users get different reports

And to have it all in one is tremendous, you can do it all with many programs but to have it in one place is very nice.

We’ve just scratched the surface, I expect we’ll find much more.

- Tested and Proven

- Fully Automated

- Different reports to different locations, in different styles

- Eliminates admin. entirely

- Improving corporate wide report distribution

- Improving access for End users and security

- Improving Automated Workflow
